

Specialised Computing and Integrated Systems Powering Next-Generation Edge AI Defence Applications

End-to-End Services and Capabilities

Captec's expertise and end-to-end business, design, operational and support services provide complete computing, electronic, electro-mechanical and rack solutions to the defence industry.

We engineer reliability, comprehensively support, maximise longevity, guarantee compliance and overcome the limitations of commercial technologies for challenging and critical operational environments.

Business

- ▶ Established since 1985
- ▶ Proven track record
- ▶ Financially robust
- ▶ Tried, tested and trusted partner
- ▶ Scalability
- ▶ International reach

Design-To-Order

- ▶ UK design of custom;
 - ▶ Ruggedised high availability computers & servers
 - ▶ 19" Racks & portable cabinets
 - ▶ Electro-mechanical enclosures & PDU's
 - ▶ Electronics & PCB assemblies
 - ▶ Embedded micro-controller software
 - ▶ ISO containers
- ▶ V&V, compliance & certification

Electro-Mechanical Integration

- ▶ Build-to-print, box builds, patch panels & ATE's
- ▶ Prototyping
- ▶ Custom cable assembly
- ▶ BOM management

Fulfilment & Logistics to Scale

- ▶ International manufacturing facilities
- ▶ Mature international supply chain
- ▶ Turnkey fulfilment
- ▶ Scale from one-off prototypes to high volume production

Captec systems are proudly engineered and manufactured in the UK and Canada.

Programme & Project Management

- ▶ Detailed programme and project planning
- ▶ Dedicated project managers and PMO
- ▶ Risk management
- ▶ Project control and reporting

Fabrication & Finishing

- ▶ Precision CNC machining capability
- ▶ Design for manufacture consulting
- ▶ Fine limit sheet metal, machining and welding
- ▶ Wet and powder coat finishing to defence standards
- ▶ Silkscreen, laser and mechanical engraving

Computer & 19" Rack Integration

- ▶ Integration of specialist computing platforms and 19" racks
- ▶ Full COTS to fully custom platforms
- ▶ Build consistency with complete component traceability
- ▶ Rugged military-grade servers and data storage systems
- ▶ High-Performance Computing, GPU processing and data encryption
- ▶ Certified to military standards

Service & Lifecycle Management

- ▶ Obsolescence management
- ▶ International service and support centres
- ▶ Designed for longevity

Edge AI: Powering the Next Generation of Defence

- 
- ▶ Defence forces are operating in increasingly complex, data-rich environments where information dominance is decisive. From electronic warfare to unmanned systems, the speed at which data can be processed, analysed, and acted upon at the edge is now as critical as the platforms themselves.

Edge AI is redefining this environment. By moving intelligence closer to the point of action, forces can exploit real-time insights, accelerate decision-making, and maintain operational superiority even in communications-denied or contested environments.

At the heart of this evolution lies trusted, high-performance computing — engineered to withstand the rigours of defence deployments, certified to the most stringent standards, and designed for longevity in mission-critical applications.

Defence Applications

- ▶ Captec has been supplying specialised computing solutions and fully integrated rack enclosures to defence programmes for many years. These platforms are designed to deliver reliability and performance in mission-critical environments across land, sea, sub-sea, and air.

The engineering team has a proven track record in developing certified, complex electro-mechanical enclosures and integrated racks for defence applications, ensuring compliance with stringent standards while meeting evolving operational requirements.

Why Choose Captec?

- ▶ Extensive engineering capabilities to deliver **COTS and bespoke platforms** that meet exacting requirements and achieve a competitive advantage through innovation at the lowest lifetime cost of ownership.
- ▶ Experienced in **complex engineering programmes**. Tender to deployment engagement ensures accurate definition of requirements and execution of outputs for successful project delivery.
- ▶ **Comprehensive support and service** with rapid turnaround to minimise downtime. Obsolescence and change control management mitigates risk and ensures continuity of supply.
- ▶ Example of deployed rack solutions in service across the Royal Navy Fleet: **Satcom, Counter Unmanned Aerial Systems (C-UAS), Platform Management Systems (PMS), Tactical Communications and Combat Management.**

Defence Racks

- ▶ Captec has developed a range of racks to meet a variety of custom form factors. Our in-house design and metalwork engineering capabilities allow us to support a wide range of needs.

Captec designs and supplies ruggedised, EMC-compliant racks that combine the use of COTS IT equipment with fully-custom trays to ensure proven reliability in the field. The racks incorporate custom engineered cable management systems and cable supply with front access for ease of serviceability. In addition, custom power distribution units are available to support both single- and three-phase equipment requirements, complete with MIL-STD interconnects.

Key Features

- ▶ **Certified:** Application specification certification DEF-STAN-0035 & Map 01-470 for shock & vibration
- ▶ **EMC:** Designed for use in TEMPEST applications. High levels of shielding effectiveness, waveguides and equipment separation
- ▶ **Thermal Management:** Specialised air management design to optimise forced air equipment cooling
- ▶ **Ingress Protection:** Water & dust protection for demanding below decks environments
- ▶ **Hazard Materials:** Compliant to material hazard list
- ▶ **Security:** Supporting high assurance, NCSC accredited encryption, as well as CPNI CLASS 2 physical security requirements
- ▶ **CO² Extinguishing:** Integration of MOD approved CO² injection system for equipment protection against fire

Reference Rack Portoflio

This reference portfolio highlights proven rack platforms developed to ensure performance, reliability, and long-term support in critical environments.

High-Performance Ruggedised Computers

- ▶ High-end specialised computers customisable to meet the unique requirements of mission-critical defence applications.

High-performance, long-life ruggedised platforms engineered explicitly for shipboard, ground vehicle, airborne or command centre applications in challenging defence environments.

Key Features

- ▶ **Certified:** Application specific certification MIL-STD 810G, MIL-STD 461F, DEF-STAN-0035, DEF-STAN-59411
- ▶ **Thermal & Power:** Optimised power and thermal design to maximise performance in SWaP intensive applications
- ▶ **Operating Temperature:** Wide operating temperature -20°C to +55°C including cold start
- ▶ **Ingress Protection:** Water and dust protection for demanding environments
- ▶ **Shock & Vibration:** Engineered protection appropriate to the deployment requirements

Rugged Portable Computers & Racks

- ▶ Captec's rugged portable computers and racks enable IT to be quickly deployed in the field despite the challenges this presents.

Captec delivers an end-to-end offering, from portable rack architecting, design, compliance testing, certification, integration and test.

Our rugged portable racks integrated with customised patch panels and cabling. Custom equipment rail mounts ensure equipment reliability in the field for specialised or commercial

Key Features

- ▶ **Certified:** Application specific certification MIL-STD 810, MIL-STD 461, MIL-STD 1275, Map 01-470
- ▶ **Connectivity:** Mate and lock connectivity to ensure secure field reliability
- ▶ **Ingress Protection:** Water and dust protection for demanding environments up to IP67
- ▶ **EMC:** Effective shield designs for EMC compliance EN61000
- ▶ **Operating Temperature:** Wide operating temperature -20°C to +55°C
- ▶ **Shock & Vibration:** Engineered protection appropriate to the deployment requirements

Ruggedised Displays

- ▶ Highly rugged military-grade LCD displays offering versatility and customisation to meet the needs of diverse defence applications.

Captec designs and delivers highly customisable multi-format LCD displays. From fully custom designs to pre-configured multi-screen configurations, drawer and panel mounts, we ensure that our displays seamlessly integrate into your systems across a diverse range of land,

Key Features

- ▶ **Certified:** Application specific certification, including DEF-STAN-0035 and DEF-STAN-461
- ▶ **Thermal & Power:** Optimised direct or PoE power with thermal design to maximise performance and longevity
- ▶ **Operating Temperature:** Engineered and built to withstand wide operating and storage temperature to match operating requirements
- ▶ **EMC:** Designed for use in TEMPEST applications, featuring high levels of shielding, cable management, waveguided and screening to maintain data security
- ▶ **Ingress Protection:** Water and dust protection as appropriate to meet specifications, compliance or operating requirements
- ▶ **Brightness Controls:** Integrated brightness controls as appropriate for day/night time applications

Consoles

- ▶ Rugged, mission-ready consoles engineered for versatility and reliability to meet the needs of a range of defence applications. Built to endure the harshest environments, Captec's consoles deliver reliability and performance where failure is not an option.

Captec designs and delivers highly configurable console solutions, from bridge and command consoles to operator terminals, control stations, and monitoring suites. With custom options supporting multiple layouts including multi-screen integration, and flexible mounting formats, Captec's consoles are engineered to seamlessly integrate into defence systems across land, maritime, aerospace, and sub-surface domains.

Key Features

- ▶ **Certified:** Designed and qualified to application-specific defence standards, including DEF STAN and MIL-STD compliance
- ▶ **Ergonomics & Layout:** Configurable layouts with optimised positioning of controls, displays, and interfaces for operator efficiency
- ▶ **Thermal & Power:** Power distribution engineered for reliability with integrated thermal management to ensure performance and longevity
- ▶ **Operating Environment:** Built to withstand vibration, shock, and wide operating temperature ranges across land, maritime, and aerospace domains
- ▶ **EMC & Security:** Engineered for secure operation in sensitive environments, incorporating shielding, filtering, and compliance with TEMPEST requirements
- ▶ **Ingress Protection:** Options for IP-rated housings to safeguard against dust, moisture, and environmental exposure

Field Deployable Shelters

- ▶ From design concept to project delivery, Captec offers a fully integrated one-stop service and fulfilment of customised ISO containers for field-deployable IT shelters.

Ready integrated with uninterruptable power, environmental conditioning and 19" and embedded racks and computing.

Key Features

- ▶ **UPS Storage Solutions:** Based upon scalable multi-battery packs to required KVAS
- ▶ **Electrical Installation:** Electrical installation is compliant to 18th Edition wiring regulations BS7671
- ▶ **Ingress Protection:** Water & Dust ingress protection for demanding environments up to IP65
- ▶ **Thermal Management:** Air conditioning & heating to support wide operating temp range between -15°C to +55°C
- ▶ **Hazard Materials:** Compliant to material hazards lists

Defence Subsystems

- ▶ Whilst rack and IT infrastructure are critical elements of many defence projects, we also understand custom subsystems form a vital part of more extensive system integrations. Such systems rarely come in a single standard form factor, and their function is as diverse as the types of projects within the defence sector.

Realising a fully custom subsystem, both in terms of design for manufacture and a suitable supply chain for the many processes involved. Our specialist Captec Subsystems Engineering division are ideally placed to support your requirements, bringing proven pedigree of manufacturing for the defence sector, this division delivers an end-to-end range of precision capabilities allowing them to support the specific needs of your projects.

Why Choose Captec?

- ▶ We are renowned as a **tried, tested, and trusted** leader in serving defence and aerospace primes.
- ▶ Committed to **value-added design support** by actively engaging in early design phases to assess risks and challenges.
- ▶ Our **cutting-edge facilities** include CNC Machining equipment, advanced finishing application, and curing facilities, for meeting exacting demands in all aspects of metal requirements.
- ▶ We operate under the robust framework of the ISO 9001 quality management system, ensuring adherence to the highest industry standards in machining and integration capabilities.

Electro-Mechanical Assembly & Manufacturing

- ▶ Captec's complete build-to-print service, provides a one-stop-shop for electro-mechanical integration from fine limit sheet metal and machining, finishing, screen printing and assembly, saving logistics between multiple subcontractors, reducing time to manufacture, and reducing project risks.

Captec provide our experience and manufacturing know-how through design for manufacture consulting and support services. During your initial development phases our teams assess risks and challenges of bringing a new design into manufacture, reducing development cycles and shortening your time to market.

Key Features

- ▶ State-of-the-art 5-axis CNC machining
- ▶ Custom enclosure engineering
- ▶ Electro-mechanical assembly
- ▶ Welding
- ▶ Wet and powder coat finishing to MIL/DEF standards
- ▶ Silkscreen and pad printing
- ▶ Laser and mechanical engraving

Electronic Subsystems

- ▶ Electronics and embedded software are advancing relentlessly, enhancing intelligence and capabilities within modern demanding defence applications. Captec has a tried and tested design and project managed process reducing development cycles and shortening your time to market.

To provide comprehensive multi-disciplinary engineering, we have expanded our capabilities to include end-to-end electronics design and embedded software development. These additional specialist skills, combined with the group's broader capabilities and experience in the defence sector allows us to be a one-stop trusted partner.

Why Choose Captec?

- ▶ Systems-level architecture design
- ▶ Single source for electronics, software interconnect, assemblies and enclosures
- ▶ Structured and object orientated design methodologies
- ▶ Turnkey electronics product or subsystem development
- ▶ Design for test, manufacture service, compliance and certification
- ▶ Extensive and proven experience in the development of embedded and real time software
- ▶ Reliability and risk reduction

Electronic Design & Manufacturing

- ▶ Captec's complete design, production, integration, and support services provide true end-to-end support for defence programmes. By eliminating the need to coordinate multiple subcontractors, Captec streamlines logistics, accelerates time to manufacture, and reduces both project risks and costs.

Captec brings specialist expertise across the full lifecycle — spanning consulting, requirements definition, feasibility, design, prototyping, certification, compliance, through-life manufacturing, component obsolescence management, and ongoing support.

With deep knowledge of specialised electronics for sensor and signal processing, combined with expertise in low-power wireless communications and IoT technologies, Captec enables the development and deployment of embedded electronics engineered for the most demanding operational environments.

Electronic Hardware Design

- ▶ Sensor measurement, signal conditioning and processing
- ▶ Active dynamic noise cancellation
- ▶ Low power RF radio transceivers & antenna design
- ▶ Power constrained battery management
- ▶ Power supply design
- ▶ PCB design, prototyping and production management
- ▶ Component sourcing and obsolescence management

Embedded Software Development

- ▶ Structured and object orientated embedded software
- ▶ Real-time embedded systems
- ▶ High speed digital data acquisition and processing
- ▶ Multi threaded multi process software
- ▶ Device drivers
- ▶ DSP and image processing
- ▶ Closed loop adaptive systems
- ▶ Sensor to database

Trusted by the Worlds Leading Organisations
